

## Course Description

Are you interested in learning how to effectively utilize Spartan®-6 FPGA architectural resources? This course supports both experienced and less experienced FPGA designers who have already completed the *Essentials of FPGA Design* course. This course focuses on understanding as well as how to properly design for the primary resources found in these popular device families.

Topics covered include device overviews, CLB construction, DCM and PLL clocking resources, global and I/O clocking techniques, memory, DSP, and source-synchronous resources. Memory controller support and the dedicated hardware resources available in each of the sub-families (PCI Express® technology, memory controller block, and GTP transceivers) are also introduced.

This course also includes a detailed discussion about proper HDL coding techniques that enables designers to avoid common mistakes and get the most out of their FPGA. A combination of modules and labs allow for practical hands-on application of the principles taught.

**Level** – FPGA 3

**Course Duration** – 2 days

**Price** –1200\$ or 12 Training Credits

**Course Part Number** – S6-21000-11-ILT

**Who Should Attend?** – For those who have taken the *Essentials of FPGA Design* course.

**Prerequisites**

- *Essentials of FPGA Design* course
- Intermediate VHDL or Verilog knowledge

**Software Tool**

- Xilinx ISE® Design Suite: Logic or System Edition 11.1

After completing this comprehensive training, you will have the necessary skills to:

- Describe all the functionality of the 6-input LUT and the CLB construction of the Spartan-6 FPGA
- Specify the CLB resources and the available slice configurations
- Define the block RAM and DSP resources available for the Spartan-6 FPGA
- Properly design for the I/O block and SERDES resources
- Identify the DCM, PLL, and clock routing resources included with each of these families
- Identify the features and supported memory controllers of the hard memory controller block
- Properly code your HDL to get the most out of these devices
- Describe the additional dedicated hardware for all the Spartan-6 family members

## Course Outline

### Day 1

- Spartan-6 FPGA Overview
- CLB Architecture
- **Lab 1:** CLB Resources
- Memory Resources
- DSP Resources
- **Lab 2:** DSP Resources
- Basic I/O Resources
- Spartan-6 FPGA I/O Resources
- **Lab 3:** I/O Resources

### Day 2

- Basic Clocking Resources
- Spartan-6 FPGA Clocking Resources
- **Lab 4:** Clocking Resources
- Memory Controllers
- HDL Coding Techniques
- **Lab 5:** HDL Coding Techniques
- Dedicated Hardware

## Lab Descriptions

- **Lab 1: CLB Resources** – Gain comprehensive experience with the CLB architecture. Synthesize a 32-bit incrementer with terminal count logic and pipelining registers. Verify that the appropriate resources were used with the RTL and technology viewers included with XST. Use the FPGA Editor to inspect the implemented results.
- **Lab 2: DSP Resources** – Using XST, synthesize and implement a 24x17 MAC. Device usage will be verified via the FPGA Editor. Using the CORE Generator™ tool, construct, instantiate, and implement a wide pipelined multiplier. Verify the results with the FPGA Editor.
- **Lab 3: I/O Resources**– Using the ISE tools, complete the construction of the transmit SERDES datapath. Explore, through simulation, the behavior of the various blocks. Also use the FPGA Editor to explore the physical resources of the Spartan-6 FPGA tile used for construction of a high-speed interface.
- **Lab 4: Clocking Resources** – Using the Clocking Wizard, build and optimize the appropriate PLL, DCM, and clock routing resources. Also instantiate these resources into the design. After the design is implemented, verify hardware usage with the FPGA Editor and explore other aspects of the silicon layout.
- **Lab 5: HDL Coding Techniques** – Using XST, synthesize various components into the design and evaluate the impact that proper HDL coding techniques have on the size and speed of implementation results.

## Register Today

Hardent, the Authorized Training Provider (ATP) for Canada (excluding British Columbia), New England (Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island and Vermont) and the Southeastern United States (Alabama, Florida, Georgia, Mississippi, North Carolina, South Carolina and Tennessee) delivers Xilinx public and private courses in your region. Visit [www.hardent.com/training](http://www.hardent.com/training) or contact Hardent's Training Coordinator for more information, to register for a class or to schedule a private course.
